

GIRARD TANKLESS WATER HEATER

TECHNICAL BULLETIN

021014- A

Magnetek – Parallax 6300 Converters

The 6300 model converter is not a “clean” power converter and will affect the operation of the Girard Water Heater circuit board. If an RV has this type of converter then a 12V line (to the Water Heater) needs to be either; run directly from the battery, run from the filtered side of the converter (if the converter has this option) or the converter needs to be replaced.

The Magnetek – Parallax 6300 Converter is prevalent on older model RVs (2000 and before) so before installation of a Girard Water Heater the installer should confirm the converter model and make corrections if the converter is a model 6300.

Any damage to a Girard Water Heater and/or the circuit board due to use of the 6300 converter is not a warrantable item.
