

HOW THE JTB WORKS!

Run Your 50 AMP RV in a 30 AMP Park that has an additional 20 AMP circuit or GFCI.

The JTB Power Solution configures the available power in a typical RV Park (30 AMP Main Circuit and 20 AMP circuit or GFCI auxiliary) for use in your RV automatically. Once the JTB Power Solution is installed you will simply plug your existing power cord into the 30 AMP service and plug the additional power cord (added to your RV with the JTB Power Solution install) into the 20 AMP circuit or GFCI. The JTB Power Solution is the only power management tool on the market that will allow you to put the full 50 AMPS of service available at a Typical RV Park 30 AMP Power Pole to work in your RV, regardless of whether the 20 AMP auxiliary outlet is a GFCI or not. Once installed, you will be able to run both AC units at the same time to keep your RV nice and cool or run your other appliances with your single AC unit simultaneously. The JTB Power Solution is a power management solution that allows you to use the power that is available now at the typical RV hook-up (30 AMP main service with auxiliary 20 AMP circuit or GFCI) in your RV. The JTB Power Solution is automatic, so there are no switches or meters to monitor. Traditional cheater boxes no longer are an effective solution and will not work with your RV. Although they are commonly sold to solve this problem you will quickly determine that at the typical RV Park Power Pole, if a GFCI is present, your cheater box will cause the GFCI to fail every time, it's just a matter of seconds when both AC units are running. The JTB Power Solution solves other power management problems too.

Put the JTB Power Solution to work in your RV today. Beating the heat utilizing both AC units or using other appliances while running your AC unit will be safe and hassle free and has never been easier.

The JTB Power Solution is ETL Tested and Certified and carries a one year warranty.

The JTB Power Solution was designed and is manufactured by fellow RV users to solve a well known power problem. Jack Hurst was the mastermind behind this unique break thru solution. "We welcome the opportunity to solve your RV Power Management problems! We live in Texas and simply cannot enjoy camping in the Texas HEAT without using both AC Units. RV Parks will not let you run generators so I created a solution to solve our problems. I think you will truly enjoy our product once you have installed it"....."cheater boxes that are commonly pushed by RV accessory houses and accessory reseller simply fail when hooked up to a GFCI. It is so frustrating... Well not any More- the JTB Power Solution has got you covered" Sincerely, **Jack Hurst**

What do OWNERS of the JTB Power Solution have to say?

The JTB Power Solution solved my power management problems. I can now run both AC units at the same time. We were miserable at 30 AMP State RV parks during the summer before we added this solution. The install was turnkey and looks factory. It does exactly what they said it would. I originally fussed with the cheater box the RV dealer sold me. The cheater box was worthless, it would trip the park breaker instantly when we plugged it up. Those days are gone now that we have the JTB Power Solution installed."

"We love it. It's the single best thing I have purchased for my coach"

Kirk H.-----Texas

"I was leery of the solution at first. For years I have tried to figure out why the cheater box that the dealer sold me would not work. I simply had made up my mind that we would not be able to enjoy our RV during the summer. Little did I know that it is not compatible with the Typical 30 AMP RV Park hookups that now have the GFCI circuits. The JTB Power Solution solved my problems. Now I can run both AC units or run my washer, Dryer, and my AC units at the same time. We really did not know what we were going to do to enjoy RV'ing during the summer. The parks would not let us run a generator and trying to cool my RV with one unit just was not cutting it. We were about to give up RV travel during the hot summer time until we found the JTB Power Solution. It fixed all of our power problems.I am so thankful we found this power solution and it was so affordable."

Fuzzy J.-----Texas

*"The JTB Power Solution will make your RV more **Efficient**, More **Reliable**, and especially **More Comfortable** in all RV Parks"*

JTB Power Solution

"The Solution to managing your RV power needs today."

Run Your 50 AMP RV in a 30 AMP Park With a [JTB Power Solution](#)!

Problems:

- RV Park Power is typically configured with a 30 Amp Plug and a 20 AMP GFCI.
- Existing Aftermarket Solution "The Cheater Box" Is not built for dual AC usage, it trips the GFCI 20 AMP breaker on contact.
- The JTB Powers Solution is the only solution that solves this problem.

The JTB Power Solution!

- Eliminates **GFCI Failure** at Typical RV Parks
- Eliminates the need for **Genset** with Dual AC Usage
- **Unlimited Usage of DUA AC in all RV's,--Travel Trailers, 5th wheels and Motor Coaches.**
- The JTB Power Solution will power your **50 AMP RV in a 30 AMP Park** by using the 20 AMP GFCI .
- **Power Management** with the JTB Power Solution is **AUTOMATIC**.

Take the JTB Test

If you answer yes to any question, you need a JTB Power Solution!

- Are you having Power Problems with your RV?
- Are you tripping AC breakers due to overload?
- Are you using a manual power management device to direct load from one appliance to another?
- Are you replacing your Power Cord Plug due to excessive heat?
- Are you tripping breakers to the washer, dryer or Hair Dryer in your RV?
- Are you using a Cheater Box that will not work with Fault Ground?
- Are you tripping the 2nd AC breaker in your 30 or 50 AMP RV?
- Do you want to add another circuit to your RV for AC, Washer Dryer, Microwave or another appliance?
- Do you want to add more AMPS to your RV?

THE JTB POWER SOLUTION solves all of the above and does it AUTOMATICALLY!
