

- Park your trailer on your camp site – traveling position.

- Install ReVo Leveler on to the nest.

- Press the power button to turn ReVo Leveler on. Percent of battery charge will be displayed.

- Press the L/R button once – Display shows “????”.

- Press the L/R button a second time – Display shows board thickness and which side of the trailer needs raised to be level left to right. Up arrow means boards under the same side as ReVo Leveler. Down arrow means opposite side.

- Place boards of the displayed thickness in front of low side wheels and pull the trailer up on them. No more guessing what boards to use. No in and out of the tow vehicle. No, “that’s good enough”.

- Your trailer is level left to right when both arrows are solid green.

- Arrows are visible from the driver’s mirror.

- Prepare the trailer for disconnecting from the tow vehicle.

- Press the DIS button – Display shows jack extension needed to reach level front to back and direction to move your trailer to reach the disconnect position.

- Use the tongue jack or landing jacks to raise or lower your trailer. Your trailer is at the correct disconnect position when both arrows are solid green.

Disconnect the tow vehicle from the trailer and drive clear of the trailer.

- Press the F/B button – Arrow will show you to raise or lower the trailer to reach level front to back.

- Using the tongue jack or landing jacks, your trailer is level front to back when both arrows are solid green.

- Press the power button to turn off ReVo Leveler.

- Remove ReVo Leveler from the nest and place it into storage until you are ready to connect the tow vehicle again.

Enjoy your stay at this campsite.
