

GASKET KIT INSTALLATION INSTRUCTIONS

This Kit is designed to allow field replacement of door gaskets that are formed into the door during the assembly process. If the installer of this Kit is unfamiliar with this product, Dometic recommends that this Kit is installed by a Qualified Service Center or a refrigeration technician.

Important: If installing this Gasket Kit on a door that contains a Hinge Repair Kit, the Hinge Plate on door must be removed to remove existing Gasket and when installing new Gasket. If installing this Gasket Kit in conjunction with a new Hinge Kit, install Gasket Kit prior to installing Hinge Kit.

REMOVAL OF OLD GASKET

1. Remove door completely from refrigerator.
2. Lay door on a flat surface with gasket up. Use the razor knife and cut the old gasket at a 45 degree angle in one corner.

3. **GENTLY** lift gasket and cut from outside edge of the door. Cut as closely as possible to the edge of the plastic liner on all four sides.

NOTE: DO NOT pull gasket from door as damage to plastic liner can occur.

4. To cut the remaining strip of gasket from the door, use the razor knife and follow the edge of the plastic liner.

5. Check to make sure all the gasket is out of the liner; then clean new gasket and door with a mild glass cleaner. It is **extremely important** to **clean** the door so the new gasket will adhere properly.

INSTALLATION OF THE NEW DOOR GASKET

1. Lay the new gasket on a clean, flat surface with the magnetic side down.
2. Use scissors to cut a 45° angle on the end of the double-stick tape. Affix tape to inner edge of gasket. Place tape all the way around the gasket—leaving approximately 1/4 inch gap at corners. (See Figure below).
3. Double-check to be sure the old gasket is completely removed from the door.

NOTE: If refrigerator has been in operation, it will be necessary to allow door to warm-up to room temperature (70° or above) before tape is applied to the door and gasket.

4. Apply 1/4 inch bead of sealer to the gaps on the four

corners of the new gasket. (See Figure below).

5. Remove paper from tape and install the new gasket carefully on the door.
6. Press the new gasket firmly in place to insure proper adhesion. **DO NOT disturb or reinstall door for 48 hours.**
7. Reinstall door on the refrigerator to complete the installation.

NOTE: If you do not get a proper seal or the door opens on its own, it may be necessary to lock the door shut for a few days. This will allow the door gasket time to shape itself to the sealing frame of the refrigerator.

APPLY SEALER TO ALL THE 1/4" GAPS AT THE CORNERS
