

ATWOOD FURNACE ADVANTAGES

THE NEXT GENERATION OF RV FURNACES

ATWOOD FEATURE

BENEFIT

ATWOOD

COMPETITION

MOST DUCT CONFIGURATIONS

The most duct configurations in the industry provides additional heating runs for maximum air distribution and floor plan flexibility.

VERTICAL OR HORIZONTAL MOUNTING

Vertical or horizontal mounting options on all series allow for increased flexibility in design.

QUIETER OPERATION

Radius tubing allows air to move more freely, reducing air turbulence for a 20% quieter furnace.

WEIGHT CONSCIOUS

The use of composite materials provide a weight savings of up to 14%.

EFFICIENT AIRFLOW

Atwood furnaces produce 44% more air flow, which means a more effective furnace that requires less energy to operate.

RESIDENTIAL DESIGN

BENEFIT

The next generation of RV furnaces are engineered with an innovative tubular heat exchanger exclusive to Atwood. Smarter, lighter, and faster, Atwood furnaces maximize air distribution to reach desired temperature quicker.
